2. The application has been amended as follows:

A. In the claims:

Claim 9. (Currently Amended) A system executing on one or more processors for determining the location of an Internet host, comprising the following computer executable components:

a first component operating in a computer system that obtains route information relating to one or more network paths between a host IP address associated with the Internet host and the computer system, wherein the network paths comprises the computer system, the Internet host, and at least one intermediate network node, and wherein the route information comprises a plurality of router labels associated with the host IP address and the at least one intermediate network node;

a second component operating in the computer system that extracts one or more location codes from the route information corresponding to a router label associated with one of the Internet host and one or more intermediate network nodes proximate the Internet host;

a third component operating in the computer system that consults a data store comprising at least one data set having location codes and corresponding location information;

a fourth component operating in the computer system to obtain location information from the data store corresponding to the location codes associated with the one of the Internet host and the one or more intermediate network nodes proximate the Internet host;

a fifth component operating in the computer system that determines a location estimate of the location of the Internet host according to the location information from the data store corresponding to the location code; and

a sixth component operating in the computer system that determines a dispersion metric representative of the accuracy of the location estimate of the location of the Internet host and selectively provide the location estimate according to dispersion metric ~~the delay time associated with the network path~~.
